

PRESS KIT – Introduction

Innovation meets Polymer – Konzelmann at IAA TRANSPORTATION 2026

IAA TRANSPORTATION 2026 is all about the profound transformation of the commercial vehicle industry. Alternative drives, electrification and increasing demands for efficiency, safety and reliability are reshaping technologies and markets.

Konzelmann will present several product innovations for the mobility of tomorrow in Hanover. The family-owned company and leading provider of innovative sealing solutions from Löchgau is presenting itself at IAA TRANSPORTATION 2026 under the guiding principle **“Innovation meets Polymer”** – showcasing how modern polymer technology and intelligent connection solutions contribute to the further development of commercial vehicles.

This motto reflects the company’s ability to develop customized solutions for key future areas: **from innovative TPU materials for demanding sealing applications and intelligent connection solutions for battery systems to customized polymer solutions for the mobility of tomorrow.**

“Our innovations are driven by specific customer requirements and are consistently geared toward the challenges of the mobility of tomorrow. With new materials and intelligent system solutions, we support our customers in making applications more efficient, reliable and future-proof,” says **Milko Konzelmann, CEO and Managing Partner.**

In the additional documents within the press kit, you will find the focal points of our trade show appearance:

- Global expertise, Swabian roots – Konzelmann in portrait
- Safety Simplified – Intelligent safety solutions for battery systems
- TPU – Sustainable material expertise for the mobility of tomorrow
- “Innovation meets Polymer” – Polymer expertise that drives change

About Konzelmann

For more than 60 years, Konzelmann GmbH has stood for innovations made of plastics. The family-run company is headquartered in Löchgau, Germany, and has an office in Detroit, USA, as well. Konzelmann develops polymeric components and systems for friction optimization as well as emission reduction. Its customers are major OEMs and Tier 1 suppliers in the automotive, medical and industrial sectors.

Konzelmann's experts follow a holistic approach to finding solutions: through intensive listening and many years of expertise in the development of special technical applications, individual solutions with a holistic view of product and process interfaces are created in exchange with the customer. The result is reduced production costs with superior product properties. Current examples include the in-house developed [KBerstring®](#), which enhances battery safety in the context of e-mobility; the internally clamped rectangular sealing ring [ID Sealing \(REDI\)](#), which can significantly reduce both leakage and friction torque; and the TÜV Süd-certified PURKON®2000 material, which provides comprehensive leakage protection in hydrogen applications. The in-house developed PURKON® materials – PURKON®2000, PURKON®2001, and the new PURKON®2080, PURKON®3000, and PURKON®4000 presented for the first time at IAA TRANSPORTATION 2026 – meet the highest material requirements and exemplify Konzelmann's application-oriented and forward-looking product development.
